System and Unit Test Report
Product: Down
Team Name: DownTown
11/30/15
Sprint 2.

User Story:
- A) As a user I want to be able to sign up for an account and store my account on the server for remote login
- B) As a user I want to be able to store all event information on parse server for remote fetching on any device
- C) As a user I want to be able to fetch a list of events I've been invited to and display the list under My Events.
- D) Fetch a list of events I've created and display it under Sent.

Scenario A:
- Open Down App; click sign up; type
  - username = <rjullig>
  - password = <cs115>
  - confirmation = <cs115>
  - click signup
- App accesses the parse servers and stores the information online.
- User sees 'sign up success' and returns to the login screen.

Scenario B:
- Open Down App; click sign up; type
  - username = <rjullig>
  - password = <cs115>
  - click Log In
- Create an event by typing
  - name = <class>
  - description = <For CS 115>
  - invite = <Robin>
  - click Next
  - location = <Kresge 327>
  - date = <11/30/2015>
  - click Next
  - time = <9:00 am>
  - accept = <yes>

- ○ deny = <no>
- ○ click Send
- The app saves the event on the server and returns you to the home screen.
- User sees the home screen and a confirmation pop up 'Event created'.

Scenario C:

- Open Down App; click sign up; type
  - ○ username = <rjullig>
  - ○ password = <cs115>
  - ○ click Log In
- Click My Events button
- The server displays a list of events user has been invited to.
- User sees the list of events fetched from server.

Scenario D:
- Open Down App; click sign up; type
  - ○ username = <rjullig>
  - ○ password = <cs115>
  - ○ click Log In
- Click My Events button
- Click Sent button
- Server fetches list of events created by this user.
- User sees the list fetched by server the server.
